Miguel A. Arroyo

miguel@arroyo.me | miguel.arroyo.me | mayanez | maarroyo12

Education

Columbia University — *New York, NY*

Ph.D in Computer Science — *2016-2020*

Dissertation: Bespoke Security for Resource Constrained Cyber-Physical Systems

Advisor: Prof. Simha Sethumadhavan

M.Phil in Computer Science — *2016-2018*

M.S. in Computer Engineering — *2014-2015*

B.S. in Computer Engineering — *2009-2013*

Publications

No-FAT: Architectural Support for Low Overhead Memory Safety Checks — *Virtual, AoE*

ACM/IEEE Annual International Symposium on Computer Architecture (ISCA) — *2021*

M. Tarek Ibn Ziad, *Miguel A. Arroyo*, Evgeny Manzhosov, Ryan Piersma, Simha Sethumadhavan

ZeRØ: Zero-Overhead Resilient Operation Under Pointer Integrity Attacks — *Virtual, AoE*

ACM/IEEE Annual International Symposium on Computer Architecture (ISCA) — *2021*

M. Tarek Ibn Ziad, *Miguel A. Arroyo*, Evgeny Manzhosov, Simha Sethumadhavan

EPI: Efficient Pointer Integrity For Security Embedded Systems — *Virtual, AoE*

IEEE International Symposium on Secure and Private Execution Environment Design (SEED) — *2021*

M. Tarek Ibn Ziad, *Miguel A. Arroyo*, Evgeny Manzhosov, Vasileios P. Kemerlis, Simha Sethumadhavan

SPAM: Stateless Permutation of Application Memory — *Virtual, AoE*

LLVM Developer's Meeting (arXiv 2007.13808) — *2020*

M. Tarek Ibn Ziad, *Miguel A. Arroyo*, Simha Sethumadhavan

Practical Byte-Granular Memory Blacklisting using Califorms — *Columbus, OH*

IEEE/ACM International Symposium on Microarchitecture (MICRO) - **IEEE Micro Top Picks Honorable Mention** — *2019*

Hiroshi Sasaki, *Miguel A. Arroyo*, M. Tarek Ibn Ziad, Koustubha Bhat, Kanad Sinha, Simha Sethumadhavan

YOLO: Frequently Resetting Cyber-Physical Systems for Security — *Baltimore, MD*

SPIE Defense and Commercial Sensing — *2019*

Miguel A. Arroyo, M. Tarek Ibn Ziad, Hidenori Kobayashi, Junfeng Yang, Simha Sethumadhavan

Experience

Rockstar Games — *California, USA (Remote)*

Senior Security Engineer — *Jul. 2022 - PRESENT*

Security Engineer — *Dec. 2020 - Jul. 2022*

- Use compiler technologies (eg. LLVM) to improve the security of our products.
- Optimize the compiler and linker to: reduce compilation time, reduce memory consumption, and improve runtime performance.
- Research and implement various forms of anti-tamper technologies and/or DRM.
- Create and innovate solutions to better secure our products from known vulnerabilities.

Columbia Computer Architecture and Security Technology Lab (CASTL) — *New York, NY*

Research Assistant — *Aug. 2015 - Dec. 2020*

- Designed & implemented numerous comprehensive memory safety defenses (ie. *No-FAT*, *ZeRØ*, *SPAM*, *EPI*) using novel micro-architectural extensions and compiler support (using LLVM) that protect against software and hardware threats.
- Studied program behavior using the LLVM compiler framework and binary instrumentation tools (eg. PIN, DynamoRIO) to guide the design of a cache formatting scheme called *Califorms* that can be used to provide memory safety.
- Designed & implemented *YOLO*, a novel security defense leveraging inertia, using a combination of C/C++ and assembly at the real-time operating system (RTOS) level to provide resilient operation for CPS microcontrollers (eg. ARM Cortex-M series).

Intel — *Santa Clara, CA*

Graduate Intern — *May 2019 - Aug. 2019*

- Performed headroom studies to aid the design of experimental hardware optimizations targeting multiple JIT engines (eg. Javascript V8, Java HotSpot) by instrumenting JIT engine source code to collect dynamic profile data using Intel PIN.
- Investigated performance tradeoffs of various GPGPU programming languages (eg. OpenCL, SYCL, CUDA, CM) on Intel iGPUs to compare benefits of explicit vs implicit SIMD programming paradigms.

Ardupilot (Google Summer of Code) *New York, NY*

Developer *May 2017 - Aug. 2017*

- Worked with Ardupilot, an autonomous vehicle autopilot firmware, on designing & implementing an efficient low-latency (in the order of a few μs) protocol to manage transport of sensor data for various vehicle types.
- Extended low-level drivers and OS internals (in C++) for an ARM Cortex-M series microcontroller to integrate and process sensor data for load-balancing tasks in coordination with the main flight controller (ARM Cortex-A) improving battery usage and overall compute performance.

Amazon *Seattle, WA*

Software Developer Engineer *Jul. 2013 - Jan. 2015*

- Developed market specific features for the *checkout* and *detail* pages for India (amazon.in) marketplace.
- Architected and implemented Amazon Business Wholesale India (amazonbusiness.in) business management backend systems using Java & Spring involving the design of appropriate DB schemas (in Amazon RDS) & infrastructure organization (in AWS) to accomodate for large traffic volume.
- Designed infrastructure routing framework and migration for Quidsi platform using Java, Spring, & AWS.

Software Developer Engineer Intern *Jun. 2012 - Aug. 2012*

- Implemented a performance metric monitoring system on FireOS (Kindle Android variant) using Java & Hadoop that allowed for development of key performance enhancements for Kindle FreeTime within FireOS.

Columbia Intrusion Detection Systems Lab *New York, NY*

Research Assistant *Aug. 2012 - May 2013*

- Found vulnerabilities in embedded system firmware from devices such as Cisco routers, VoIP phones, and firewalls using reverse engineering tools such as IDA Pro.
- Built database for processing and vetting firmware images for vulnerabilities using Python & MongoDB.

International Physics Olympiad (IPhO) *Hanoi, Vietnam*

Team Leader *Jul. 2008*

- After a series of examinations was selected to represent Puerto Rico at the International Physics Olympiad 2008, a competition that tests general physics knowledge.
- Competed at IPhO 2008 in Vietnam.

U.S. Department of Energy National Science Bowl *Washington, D.C.*

Co-Captain *Apr. 2008 - May 2008*

- Represented Saint John's School in Condado, PR at regional and statewide rounds.
- Acted as the team's spokesperson and solved issues in the event of disputes over questions during the competition.
- Trained in solving Physics and Chemistry questions of the competition.
- Won regional & statewide rounds and competed in National rounds in Washington D.C.

Skills

Software Development

C/C++ · Python · Assembly (x86-64,ARM) · Go · Lua · Lisp | clang+LLVM+lld · CMake · Git · Docker · Linux · Windows

Foreign Languages

Spanish (Native) · French (Advanced) · Japanese (Intermediate)

Honors & Awards

- IEEE Micro Top Picks from 2019 Computer Architecture Conferences honorable mention
- RSAC Security Scholar 2017
- Columbia SEAS Translational Fellowship 2017 (one of three)

Talks & Outreach

A Look at Memory Safety *Virtual, AoE*

Silicon Valley Cyber Security Meetup *May 2020*

Go Go Gadget! An Introduction to Return Oriented Programming *Santa Clara, CA*

Silicon Valley Cyber Security Meetup *Apr. 2019*

WACI: How to Make Driving Awesome *Williamsburg, VA*

ACM Architectural Support for Programming Languages and Operating Systems (ASPLOS) *Mar. 2018*

Academic Service

Program Committee, ACM Architectural Support for Programming Languages and Operating Systems (ASPLOS) *2025*
Program Committee, IEEE/ACM International Symposium on Microarchitecture (MICRO) *2024*
Program Committee, LLVM Developers' Meeting *2024*
Program Committee, IEEE International Conference on Computer Design (ICCD) *2023*
Reviewer, IEEE Transactions on Computers *2022*
Reviewer, IEEE Symposium on Security and Privacy (S&P) *2018, 2021*
Reviewer, Communications of the ACM *2020*
Reviewer, IEEE Design & Test *2019*

Teaching Experience

Instructor *New York, NY*

Oxbridge Academic Programs *Jun. 2016 - Aug. 2016*

- Designed a curriculum for Oxbridge's New York College Experience program Computer Science course of 15 high-school students.

Teaching Assistant *New York, NY*

Security I (COMS W4181)	*Sep. 2018 - Dec. 2018*
Computer Architecture (CSEE 4824)	*Jan. 2018 - May 2018*
Intro to Python (ENGI E1006)	*Jan. 2015 - May 2015*
Intro to CS in Java (COMS W1004)	*Aug. 2012 - May 2013*

Patents

Method and System for Obfuscating and Protecting Game Logic and Variables During Video Game Compilation

US12050668B1 *2024*
